SKILLS

Languages:	Russian, English (B1-B2)
Programming languages:	hon, Go, JS
Technologies & Knowledge:	Django, API, telegram-bot-API
Other:	Linux, PostgreSQL, Docker, Docker-compose, HTTP

PROJECTS

TOTP-Telegram

FEBRUARY 2025 – PRESENT

Telegram bot with browser extension for authentication using TOTP (time-based one-time passwords). Designed for more convenient access to one-time passwords without the need to use phone and provide extension authentication via telegram.

Other works:

- **FCrDNS** - utility that can quickly do FCrDNS check of a large amount of IP addresses
- **pinterest-parser** - simple parser for pinterest
- **yt-downloader** - telegram bot to download stuff from youtube
- **telegram-APi** - self-made go-module to build telegram bots

About

I'm self-taught, learned to program by reading documentation and source codes of other projects, trying to repeat something from this myself. I like to write code, especially API requests and improve/refactor existing projects. Use Linux as my main OS.
